

Communications Certification

Purpose

The goal of our program is to help engineering practitioners and their employers, stay current and competitive in our fast-paced industry. The certification is intended to address not only current technologies, but also emerging technologies through regular revisions and updates to the examination. By addressing not only what engineering practitioners are doing today, but also what they will need to be able to do tomorrow, we believe certification by the Communications Society will be of high value to both employers and practitioners.

WCET Certification

ComSoc is currently developing a global certification program in Wireless Communication Engineering Technologies (WCET). The WCET Certification will offer an examination for individuals with an undergraduate level degree and at least three years experience to demonstrate a standardized level of knowledge in wireless communications engineering.
