

Introducing New Course - M2M for Engineers and Managers

[IEEE ComSoc Training](#) is offering a new online course - [Overview of Machine-to-Machine \(M2M\) for Engineers and Managers on 18 December 2012, 9:00 am - 4:30 pm EDT.](#)

[This one-day course](#) provides engineers and managers with the insights and perspectives required to take their cellular-based Machine-to-Machine (M2M) solutions from promising concept to marketplace success by successfully navigating the maze from analysis, design, approvals and support, all the way through to marketing options and launch. Course attendees will learn how to describe the M2M Business Case, select an appropriate Business Model, and explain how to prepare for deployment. In addition, the course will guide you through regulatory, industry and carrier certification processes for wireless devices and what certification may be required depending on the solution and country.

At the end of the course, attendees will be able to:

- Define M2M and clarify the main components that comprise a cellular M2M solution
- Identify the possible overall processes involved in bringing a solution to the M2M marketplace
- Describe the wireless technologies and hardware available and the selection criteria for a solution
- Outline steps to consider when designing the solution up front in preparation for ease of certification
- Relate the Over-the-Air Performance Considerations
- List the M2M platforms available to manage the SIMS/Devices

A copy of the instructor's PowerPoint slides is included. Access to the streaming video recording is provided for seven days after the course has been taught. Earn 0.6 IEEE Continuing Education Units for participating. System Requirements: PC-based attendees Required: Windows® 7, Vista, XP, 2003 Server or 2000 Macintosh®-based attendees Required: Mac OS® X 10.4.11 (Tiger®) or newer

Date, Time, Cost

18 December 2012 - Online
9:00am - 4:30pm EDT
\$250 IEEE / ComSoc member
\$300 non-member
Register by 14 December to secure a seat.
