

Students Develop App for ComSoc

Prof. James Won-Ki Hong and his students Yeongrak Choi and Yoonseon Han from POSTECH, developed and provided an iPhone application for ComSoc members with an Apple iOS device such as the iPhone, iPad or iPod Touch.

The App was developed as part of a term project for a graduate course called, “Smartphonomics: Convergence using Smart Phones and Devices” in the Division of IT Convergence Engineering, [POSTECH](#), Korea.

A beta version of this application was demonstrated at the ComSoc committee meetings at [GIOBECOM 2010](#) in Miami last December. It showed how ComSoc members might soon be able to access ComSoc online content via their smartphones. [The ComSoc iPhone App is now available to our members from the Apple App Store for free.](#)

The team plans to provide similar native smartphone applications for Android-based mobile devices soon.
