

Plagiarism Policy

Plagiarism Procedures for use by IEEE Communications Society Conference TPC Chairs and Publications Editors in Chief

1. Definition:

IEEE defines plagiarism as the reuse of someone else's published processes, results, or words without explicitly acknowledging the original author and source. For additional detail see the web page and the referenced web pages:

http://www.ieee.org/web/publications/rights/Plagiarism_Guidelines_Intro.html

2. IEEE ComSoc Guidelines for Conference Proceedings:

To help insure confidentiality, due process and consistency across all Society publication, cases involving papers intended for, or published in, IEEE ComSoc sponsored conference proceedings, journals, and / or magazines, allegations of author misconduct shall be investigated by the IEEE ComSoc designated Volunteer point of contact for author misconduct and the Ex Director. They will convene an adhoc committee as proscribed in the IEEE procedures.

3.0 Responsibilities

3.1 The Adhoc Committee and the **Executive Director (ED)** shall insure full compliance with IEEE Policies, Procedures and Guidelines.

In the case of conferences, they shall keep the conference Technical Program Chair (TPC) informed and may make use of such fact finding assistance as may be offered and deemed appropriate. The TPC may then participate in the determination of corrective action to be recommended to the IEEE VP Publications.

In the case of journal and magazine articles, the appropriate Editor in Chief (EIC) shall be consulted, may be involved in any investigation of the facts and subsequently may be involved in the determination of corrective action.

3.2 Complainants shall bring cases of suspected author misconduct to the attention of the Technical Program Chair (TPC) or Editor in Chief (EIC) as appropriate. The TPC/EIC shall insure that the following documentation is provided to the ORC Chair and the Executive Director:

- a. Written description of the alleged misconduct. For the original article: Title, Full list of author names, Publication title in which original appeared.

- b. For the use of someone else's ideas: Title of idea, Full list of creators, and Verifiable date of creation.
- c. For the alleged plagiarized paper: Title of article, Full list of author names, Publication title in which the paper appeared.
- d. Copies of both articles or, if appropriate, documentation of an idea and the subsequent article, preferably with highlighted text showing all instances of inappropriate reuse.
- e. Full name and address of complainant.

It should be noted that similar procedures will be followed in the case of multiple simultaneous submissions of the same work or of essentially the same work to different venues.

3.3 All Participating Parties shall be familiar with the IEEE Plagiarism Guidelines.

4.0 Due Process Overview:

Due process and confidentiality are the critical factors in all cases of alleged author misconduct. Anticipating all situations is not possible; however, for cases involving IEEE Communications Society publications, when you become aware of potential author misconduct, the following steps should be taken whenever possible.

1. Review the IEEE guidelines:
http://www.ieee.org/web/publications/rights/Plagiarism_Guidelines_Intro.....
2. Notify the Conference Technical program Chair (TPC) or the appropriate EIC and the IEEE ComSoc ORC Chair or the Executive Director. DO NOT contact the author(s) whose conduct has been brought into question.
3. The ComSoc Executive Director will provide administrative support to help insure due process. After receiving the documentation, he/she will notify the IEEE VP Publications of an investigation in progress, and contact the author(s) in question requesting an explanation. Based on the response, and in consultation with the DoJ and the TPC/EIC, the Executive Director will obtain any additional information deemed appropriate which may include review of the paper in question by experts in the field to help determine the level of misconduct.
4. The ORC Chair and the Executive Director will review all of the documentation and draft a notification to the IEEE VP Publication of the facts in the case and the recommended corrective action. The author(s) in question will be advised that the case has gone forward.
