

***IEEE Communications Letters* follows a double-blind review process**

IEEE Communications Letters (COMML) follows a double-blind review process. This means that in addition to the reviewers being unknown to the authors, the authors are also unknown to the reviewers. The double-blind review process is a way to prevent bias or the perception of bias towards any author.

To preserve the required anonymity, all submissions to *IEEE COMML* cannot contain any information that identifies the authors, their places of work or their funding sources.

The authors submitting their manuscripts to *IEEE COMML* for review need to comply with the following rules:

- Remove names and affiliations from the manuscript. Use instead Author 1, Author 2, etc. (the number of authors need to match the one provided under Manuscript Central). The same in the footnote for the affiliations.
- When referring to their prior work, the authors need to avoid using terms as "my" or "our" but should reference the work in the third person (e.g., "It was shown that [ref]...").
- Remove references to funding sources.
- Remove acknowledgments.
- Make sure that the figures do not contain any affiliation related identifier.
- Do not submit the IEEE Copyright Form.

Note that lack of affiliation, funding, etc., is for the submitted manuscript, and not for the final accepted/publishable paper. Additionally, the IEEE Copyright Form will need to be submitted for the accepted/publishable paper.
